

GREENSOLUTIONS™

Erosion Control Logs

GREENSOLUTIONS™ Erosion Control Logs, commonly called wattles, are a very effective sediment control measure. Available in a variety of sizes: 9", 12" and 18", additional diameters are available for more severe applications. Erosion Control Logs are contained by a biodegradable netting which is designed to last at least two construction seasons.

GREENSOLUTIONS™ Erosion Control Logs, when properly installed, reduce the rate of water flow, absorbing water and filtering sediment. A significant amount of sediment will drop out of the water behind the log during a rain event. Fiber is weed free and naturally biodegradable, enhancing the soil and helping vegetation become established. On steep slopes, logs used in conjunction with a properly designed and installed GREENSOLUTIONS™ erosion control blanket results in an effective BMP.

Advantages:

- Easy to transport and install
- A low cost solution to sheet and rill erosion problems
- Flexible enough to conform to most applications
- Helps establish and store moisture for native vegetation
- Plastic netting is biodegradable and straw becomes incorporated into soil

EROSION CONTROL LOG DIMENSIONS

	GSW9	GSW12	GSW18
Diameter:	9"	12"	18"
Standard Length:	10'	10'	10'
Weight (± 10%):	16 lbs	33 lbs	52 lbs

Custom lengths available upon request

PRODUCT SPECIFICATIONS
